

### Request an official ID check in seconds, from anywhere in the world, with Proof™ by Ipsidy.

In a world of increasing fraud and security threats, it's more important than ever to verify identity with certainty. Have complete confidence in the identities of customers and prospective employees with Proof by Ipsidy – a mobile identity verification solution using government-issued credentials as the trusted source, combined with real-time biometric certainty and the convenience of mobile technology.

Proof provides remote mobile identity proofing and transaction authentication for high-integrity business interactions like major financial transactions, application and enrollment processes, new customer, employee, and student on-boarding, sale of age-restricted product, building access verification, and more.

## How it Works

- ✓ Employers, businesses, institutions and organizations can remotely validate a person's identity using different types of Government-issued credentials - ePassport, eID (ICAO 9303 Chip), US Driver's License.
- ✓ Using the camera on any Apple or Android smart phone, Proof scans an ID to extract critical information and reads and validates meaningful data that's stored in ePassports and eIDs to provide an official identity check.
- ✓ No hardware needed – the customer captures a real-time selfie that is matched against the facial image stored within ePassport or eID chips or printed on government issued IDs, and verifies identity.
- ✓ Proof by Ipsidy checks the biometric match of the selfie image against the image extracted from the credential chip and the validity of Chip Data Signature and Signature Trust Chain
- ✓ Requesting parties can receive all data extracted from the credential, facial images (live and stored), an image of the ID, a biometric match score, and a record of active end-user consent to the entire process.
- ✓ Ipsidy offers Proof from the secure Ipsidy Identity Portal allowing agents to simply enter a mobile phone number to deliver a request to a prospective customer who uses Ipsidy's mobile app to complete the process in seconds. Additionally, Proof can be integrated with your systems using our simple APIs.

## Benefits

- ✓ Enroll new customers faster, from anywhere in the world, with greater biometric certainty.
- ✓ Eliminate the need for face-to-face, in-person ID checks.
- ✓ Stop asking for photocopies that need to be safely stored or destroyed.
- ✓ Significantly decrease the time it takes to verify a person's identity with an official ID.
- ✓ Optimize business processes with the Ipsidy platform: A verified identity obtained from Proof can be used for future, multi-factor authentication protection on a variety of account transactions.
